

Where do minibeasts live ?

Minibeasts are tiny animals that can be found all around us, in our houses and gardens, sheds and garages, parks and school grounds. A **habitat** is where an animal lives. It's more than just a home as it includes everything an animal needs to survive. Minibeasts need food, water and shelter. A habitat could be as big as a forest or as small as a leaf.

Can you draw a minibeast that you might find in each of these habitats?

In the air

Under a log

On a plant or tree

In the soil
