

The animals and plants of Lagan Valley Regional Park can be put into several categories:

Producer

A producer is something that can make its own food. Plants are producers because they use sunlight to make food or energy.

Can you name 2 types of producers?

Herbivore

Herbivores are animals that ONLY eat plants.

Can you name three kinds of herbivores you would find in a woodland?

Carnivore

Carnivores are animals that ONLY eat other animals.

Can you name three carnivores you might find in a river?

Omnivore

Can you guess what an omnivore is and give 2 examples?

Can you draw a food chain that you might find in a **forest**? Include the sun, one producer, one herbivore and one carnivore?

Can you draw a food chain that you might find in a **pond**? Include the sun, one producer, one herbivore and two carnivores?

Can you draw a food chain you might find in a **meadow**? Include the sun, one producer, and one carnivore and one omnivore.
